

Technology has always played a big part in meeting the food needs of a community, both in the past and in the present time. The purpose of this investigation is to determine the sustainability impact of various technologies on a community's economy, as well as its natural and social environments.

INFORMATION ABOUT SOURCE:

(circle) It is a primary/ secondary source of information.	Type (e.g. video):	Title/Author/speaker:
---	--------------------	-----------------------

Complete the following data collection table as you engage with the information source. Share your ideas with your peers to strengthen your understandings of the key vocabulary terms. Ensure to stick this form into your learning portfolio.

Underline the traditional technologies and **Circle** the modern ones.

Food/fibre Technology Item	Its function:						Criteria for Sustainability (tick if appropriate)			
	gather	farm	modify	preserve	package	Cook/prepare	serve	Economically sustainable	environmentally sustainable	socially sustainable

Analyse your data

What do you believe the data is telling you? Use examples from the 'source' to explain your 'opinion'. And don't forget your OREO strategy for expressing opinion.
